Formale Semantik 09. Tempus und Modalität

Roland Schäfer

Institut für Germanistische Sprachwissenschaft Friedrich-Schiller-Universität Jena

stets aktuelle Fassungen: https://github.com/rsling/VL-Deutsche-Syntax

Inhalt

- - Priorian operators
 - Tense raising
 - Interpretation Some problems
- - Modality

 Realizations of modality

- Types of modality
- Modeling the background
- Embedding
 - Syntax
 - Believe semantics

 - AmbiguitiesInfinitives and gerunds

Understand how simple tense logic can be represented by operators shifting i indices.

- Understand how simple tense logic can be represented by operators shifting i indices.
- See why tense operators are sentence operators.

- Understand how simple tense logic can be represented by operators shifting i indices.
- See why tense operators are sentence operators.
- See why a multi-dimensional theory of tenses and a better handling of tense embedding are required.

- Understand how simple tense logic can be represented by operators shifting i indices.
- See why tense operators are sentence operators.
- See why a multi-dimensional theory of tenses and a better handling of tense embedding are required.
- See how we restrict (different types of) propositional backgrounds.

- Understand how simple tense logic can be represented by operators shifting i indices.
- See why tense operators are sentence operators.
- See why a multi-dimensional theory of tenses and a better handling of tense embedding are required.
- See how we restrict (different types of) propositional backgrounds.
- Understand how opaque contexts affect meaning (incl. believe type verbs).

- Understand how simple tense logic can be represented by operators shifting i indices.
- See why tense operators are sentence operators.
- See why a multi-dimensional theory of tenses and a better handling of tense embedding are required.
- See how we restrict (different types of) propositional backgrounds.
- Understand how opaque contexts affect meaning (incl. believe type verbs).
- Get a first idea of why we need the up operator ^.

Tense

• present: no operator (ϕ 'it is the case that ϕ ')

- present: no operator (ϕ 'it is the case that ϕ ')
- past: $P(P\phi')$ it was the case that ϕ')

- present: no operator $(\phi \text{ 'it is the case that } \phi')$
- past: P (P ϕ 'it was the case that ϕ ')
- future: **F** (**F** ϕ 'it will be the case that ϕ ')

- present: no operator $(\phi \text{ 'it is the case that } \phi')$
- past: P (P ϕ 'it was the case that ϕ ')
- future: **F** (**F** ϕ 'it will be the case that ϕ ')
- it will always be the case... ($\mathbf{G} = \neg \mathbf{F} \neg \phi$)

- present: no operator $(\phi \text{ 'it is the case that } \phi')$
- past: P (P ϕ 'it was the case that ϕ ')
- future: **F** (**F** ϕ 'it will be the case that ϕ ')
- it will always be the case... ($\mathbf{G} = \neg \mathbf{F} \neg \phi$)
- it was always the case... ($\mathbf{H} = \neg \mathbf{P} \neg \phi$)

• PD(a) 'Arno Schmidt (has?) died.'

- PD(a) 'Arno Schmidt (has?) died.'
- relative to the current $\langle w, i \rangle$: $[PD(a)]^{\mathcal{M}, w, i, g}$

- PD(a) 'Arno Schmidt (has?) died.'
- relative to the current $\langle w, i \rangle$: $[PD(a)]^{\mathcal{M}, w, i, g}$
- ...is true iff there is some i', $\langle i', i \rangle \in \langle$ and

- PD(a) 'Arno Schmidt (has?) died.'
- relative to the current $\langle w, i \rangle$: $[PD(a)]^{\mathcal{M}, w, i, g}$
- ...is true iff there is some i', $\langle i', i \rangle \in \langle$ and

• tense operators (TOp) are sentence (wff) Op's

- tense operators (TOp) are sentence (wff) Op's
- raise it to sentence-scopal position

- tense operators (TOp) are sentence (wff) Op's
- raise it to sentence-scopal position
- TP/IP position is motivated by copular/auxiliary elements

- tense operators (TOp) are sentence (wff) Op's
- raise it to sentence-scopal position
- TP/IP position is motivated by copular/auxiliary elements
- He is stupid. vs. Kare-wa bakarashi-i.

- tense operators (TOp) are sentence (wff) Op's
- raise it to sentence-scopal position
- TP/IP position is motivated by copular/auxiliary elements
- He is stupid. vs. Kare-wa bakarashi-i.
- He was stupid. vs. Kare-wa bakarashi-katta.

- tense operators (TOp) are sentence (wff) Op's
- raise it to sentence-scopal position
- TP/IP position is motivated by copular/auxiliary elements
- He is stupid. vs. Kare-wa bakarashi-i.
- He was stupid. vs. Kare-wa bakarashi-katta.
- What_i did you expect t_i? vs. Nani-o yokishi-ta-ka.

T' → TVP (adds tense to VP)

- $T' \rightarrow TVP$ (adds tense to VP)
- ullet TP o NP T'

- $T' \rightarrow TVP$ (adds tense to VP)
- $TP \rightarrow NP T'$
- $\bullet \ \, \text{TP} \rightarrow \text{TP conj TP}$

- $T' \rightarrow TVP$ (adds tense to VP)
- $TP \rightarrow NP T'$
- TP \rightarrow TP conj TP
- TP \rightarrow neg TP

- $T' \rightarrow TVP$ (adds tense to VP)
- TP \rightarrow NP T'
- TP \rightarrow TP conj TP
- TP \rightarrow neg TP
- $[_{TP} NP T VP] \Rightarrow [_{TP} T NP VP]$ (T raising)

Quantification over instants

•
$$\llbracket \mathbf{P}TP \rrbracket^{\mathcal{M}, \mathsf{w}, i, g} = 1$$

Quantification over instants

- $[PTP]^{M,w,i,g} = 1$
- iff among all $\langle i_n, i \rangle \in \langle$

Quantification over instants

- $\|\mathbf{PTP}\|^{\mathcal{M}, w, i, g} = 1$
- iff among $\overline{\text{all }\langle i_n,i\rangle}\in <$
- there is at least one s.t. $[TP]^{\mathcal{M}, w, i', g} = 1$

Valuations as in Chierchia's M₃

• *U*: domain of quantification

Valuations as in Chierchia's M₃

- U: domain of quantification
- $V(\beta)$: non-relativized function for all β which are not a proper name

Valuations as in Chierchia's M₃

- U: domain of quantification
- $V(\beta)$: non-relativized function for all β which are not a proper name
- $V(\beta)(\langle w, i \rangle)$: V valuates β to a function from world-time pairs to the denotata of the predicate (sets of individuals, tuples of them, etc.)

Natural tenses

NL tenses beyond TOp's:

Natural tenses

- NL tenses beyond TOp's:
- Arno Schmidt had already read Poe when he started writing 'Zettels Traum'.

Natural tenses

- NL tenses beyond TOp's:
- Arno Schmidt had already read Poe when he started writing 'Zettels Traum'.
- Gosh, I forgot to feed the cat.

Natural tenses

- NL tenses beyond TOp's:
- Arno Schmidt had already read Poe when he started writing 'Zettels Traum'.
- Gosh, I forgot to feed the cat.
- shifts of evaluation time

Reichenbach

• A man was born who will be king.

- A man was born who will be king.
- P(a man is born F(who be king))?

- A man was born who will be king.
- P(a man is born F(who be king))?
- Yesterday, Maria woke up happy.

- A man was born who will be king.
- P(a man is born F(who be king))?
- Yesterday, Maria woke up happy.
- Y(P(Maria wake up happy))?

• tense forms: I eat up to 100 nachos a minute.

- tense forms: I eat up to 100 nachos a minute.
- mood: Responderet alius minus sapienter.

- tense forms: I eat up to 100 nachos a minute.
- mood: Responderet alius minus sapienter.
- modal auxiliaries: Herr Webelhuth can look like Michael Moore.

- tense forms: I eat up to 100 nachos a minute.
- mood: Responderet alius minus sapienter.
- modal auxiliaries: Herr Webelhuth can look like Michael Moore.
- adverbs: Maybe Herr Keydana will show up.

- tense forms: I eat up to 100 nachos a minute.
- mood: Responderet alius minus sapienter.
- modal auxiliaries: Herr Webelhuth can look like Michael Moore.
- adverbs: Maybe Herr Keydana will show up.
- affixes: Frau Eckardt is recognizable.

• like tense: sentence operators

- like tense: sentence operators
- modal Aux in English is tense-insensitive (evidence for Infl)

- like tense: sentence operators
- modal Aux in English is tense-insensitive (evidence for Infl)
- ullet and \Diamond in intensional predicate calculi (IPC): exploit the full set of possible worlds

- like tense: sentence operators
- modal Aux in English is tense-insensitive (evidence for Infl)
- ullet and \Diamond in intensional predicate calculi (IPC): exploit the full set of possible worlds
- in NL: evaluation of modal expressions against restricted conversational backgrounds

The background

 different sets of possible worlds under consideration for different types of modal expressions

The background

- different sets of possible worlds under consideration for different types of modal expressions
- different types of modality: different sets of admitted possible worlds

The background

- different sets of possible worlds under consideration for different types of modal expressions
- different types of modality: different sets of admitted possible worlds
- we call the conversationally relevant background the set of $\langle w, i \rangle$ pairs relevant to the interpretation of the sentence

• Agent Cooper cannot solve the mystery.

- Agent Cooper cannot solve the mystery.
- translated into root modal IPC: $\neg \lozenge S(c, m)$

- Agent Cooper cannot solve the mystery.
- translated into root modal IPC: $\neg \lozenge S(c, m)$
- wrong interpretation: Under no possible circumstances can Cooper solve the mystery.

- Agent Cooper cannot solve the mystery.
- translated into root modal IPC: $\neg \lozenge S(c, m)$
- wrong interpretation: Under no possible circumstances can Cooper solve the mystery.
- usually, some obvious facts constitute the background:

- Agent Cooper cannot solve the mystery.
- translated into root modal IPC: $\neg \lozenge S(c, m)$
- wrong interpretation: Under no possible circumstances can Cooper solve the mystery.
- usually, some obvious facts constitute the background:
 - ▶ he could, but some relevant information is missing

- Agent Cooper cannot solve the mystery.
- translated into root modal IPC: $\neg \lozenge S(c, m)$
- wrong interpretation: Under no possible circumstances can Cooper solve the mystery.
- usually, some obvious facts constitute the background:
 - ▶ he could, but some relevant information is missing
 - he could, but is sick

- Agent Cooper cannot solve the mystery.
- translated into root modal IPC: $\neg \lozenge S(c, m)$
- wrong interpretation: Under no possible circumstances can Cooper solve the mystery.
- usually, some obvious facts constitute the background:
 - ▶ he could, but some relevant information is missing
 - he could, but is sick
 - ▶ he could, but ...

• Leo Johnson must be the murderer of Laura Palmer.

- Leo Johnson must be the murderer of Laura Palmer.
- in accordance with the known facts (e.g., in episode 7 of Twin Peaks):

- Leo Johnson must be the murderer of Laura Palmer.
- in accordance with the known facts (e.g., in episode 7 of Twin Peaks):
 - ► Leo Johnson is a violent person.

- Leo Johnson must be the murderer of Laura Palmer.
- in accordance with the known facts (e.g., in episode 7 of Twin Peaks):
 - Leo Johnson is a violent person.
 - Leo smuggles cocaine, Laura was addicted to it.

- Leo Johnson must be the murderer of Laura Palmer.
- in accordance with the known facts (e.g., in episode 7 of Twin Peaks):
 - ▶ Leo Johnson is a violent person.
 - ▶ Leo smuggles cocaine, Laura was addicted to it.
 - ► Leo is connected to Jacques Renault who is the bartender of *One Eyed Jack's* where Laura worked as a prostitute.

- Leo Johnson must be the murderer of Laura Palmer.
- in accordance with the known facts (e.g., in episode 7 of Twin Peaks):
 - ► Leo Johnson is a violent person.
 - ▶ Leo smuggles cocaine, Laura was addicted to it.
 - ▶ Leo is connected to Jacques Renault who is the bartender of *One Eyed Jack's* where Laura worked as a prostitute.

...

- Leo Johnson must be the murderer of Laura Palmer.
- in accordance with the known facts (e.g., in episode 7 of Twin Peaks):
 - ▶ Leo Johnson is a violent person.
 - Leo smuggles cocaine, Laura was addicted to it.
 - Leo is connected to Jacques Renault who is the bartender of *One Eyed Jack's* where Laura worked as a prostitute.
 - **...**
- which constitute the epistemic background, the sentence is true

- Leo Johnson must be the murderer of Laura Palmer.
- in accordance with the known facts (e.g., in episode 7 of Twin Peaks):
 - ► Leo Johnson is a violent person.
 - ▶ Leo smuggles cocaine, Laura was addicted to it.
 - ▶ Leo is connected to Jacques Renault who is the bartender of *One Eyed Jack's* where Laura worked as a prostitute.
 - **...**
- which constitute the epistemic background, the sentence is true
- known facts narrow down the root background

• Agent Cooper must not solve the mystery.

- Agent Cooper must not solve the mystery.
- assume:

- Agent Cooper must not solve the mystery.
- assume:
 - there is some U.S. law which allows a local sheriff to ask the FBI to keep out of local murder investigations

- Agent Cooper must not solve the mystery.
- assume:
 - there is some U.S. law which allows a local sheriff to ask the FBI to keep out of local murder investigations
 - ▶ Sheriff Truman has asked the FBI headquarters to keep out of the Palmer investigation

- Agent Cooper must not solve the mystery.
- assume:
 - there is some U.S. law which allows a local sheriff to ask the FBI to keep out of local murder investigations
 - ▶ Sheriff Truman has asked the FBI headquarters to keep out of the Palmer investigation
 - as a special agent, Cooper is required to obey Bureau policy

- Agent Cooper must not solve the mystery.
- assume:
 - there is some U.S. law which allows a local sheriff to ask the FBI to keep out of local murder investigations
 - ▶ Sheriff Truman has asked the FBI headquarters to keep out of the Palmer investigation
 - as a special agent, Cooper is required to obey Bureau policy
- Deontic backgrounds are narrowed down by normative rules and moral ideals.

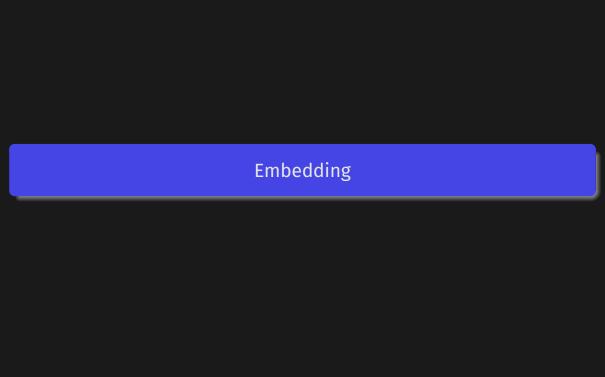

- Agent Cooper must not solve the mystery.
- assume:
 - there is some U.S. law which allows a local sheriff to ask the FBI to keep out of local murder investigations
 - Sheriff Truman has asked the FBI headquarters to keep out of the Palmer investigation
 - as a special agent, Cooper is required to obey Bureau policy
- Deontic backgrounds are narrowed down by normative rules and moral ideals.
- statable in propositional form (ten commandments, law, ...)

specify the kind of background against which you evaluate under the given situation

- specify the kind of background against which you evaluate under the given situation
- we need:
 - a function from $\langle {\sf w},i
 angle$ to the relevant background set of $\langle {\sf w}_{\it n},i_{\it m}
 angle$

- specify the kind of background against which you evaluate under the given situation
- we need: a function from $\langle w, i \rangle$ to the relevant background set of $\langle w_n, i_m \rangle$
- reuse g: $q(\langle w, i \rangle) = \{p_1, p_2, \dots, p_n\} = \{\langle w, i \rangle_1, \langle w, i \rangle_2, \dots, \langle w, i \rangle_n\}$

- specify the kind of background against which you evaluate under the given situation
- we need: a function from $\langle w, i \rangle$ to the relevant background set of $\langle w_n, i_m \rangle$
- reuse g: $g(\langle w, i \rangle) = \{ p_1, p_2, \dots, p_n \} = \{ \langle w, i \rangle_1, \langle w, i \rangle_2, \dots, \langle w, i \rangle_n \}$
- such that all possible worlds are: $\bigcap g(\langle w, i \rangle)$

• that is a complementizer, it turns a sentence into an argument.

- that is a complementizer, it turns a sentence into an argument.
- ps rule: $CP \rightarrow CIP$

- that is a complementizer, it turns a sentence into an argument.
- ps rule: CP → C IP
- [IP Racine believes [CP that [IP theatre rules]]]

- that is a complementizer, it turns a sentence into an argument.
- ps rule: CP → C IP
- [IP Racine believes [CP that [IP theatre rules]]]
- CP (fully fledged sentence) receives theta role by believe under government.

gerunds:
 [IP Stockhausen has plans [IP to write another 29 hour opera]]

- gerunds:
 [IP Stockhausen has plans [IP to write another 29 hour opera]]
- incomplete embedded IP, no subject

- gerunds:
 [IP Stockhausen has plans [IP to write another 29 hour opera]]
- incomplete embedded IP, no subject
- internal theta role of has plans: to IP

- gerunds:
 [IP Stockhausen has plans [IP to write another 29 hour opera]]
- incomplete embedded IP, no subject
- internal theta role of has plans: to IP
- external theta role of write: to?

- gerunds:
 [IP Stockhausen has plans [IP to write another 29 hour opera]]
- incomplete embedded IP, no subject
- internal theta role of has plans: to IP
- external theta role of write: to ?
- PRO, controlled by the subject of has plans:
 [IP Stockhausen has plans [IP PRO to write another 29 hour opera]]

• verbs like believe: propositional attitude verbs

- verbs like believe: propositional attitude verbs
- content of the believe: a pice of information held to be true by the believer, hence a proposition, a $\langle w_n, i_m \rangle$

- verbs like believe: propositional attitude verbs
- content of the believe: a pice of information held to be true by the believer, hence a proposition, a $\langle w_n, i_m \rangle$
- signalling one element in the background assumed by the believer

- verbs like believe: propositional attitude verbs
- content of the believe: a pice of information held to be true by the believer, hence a proposition, a $\langle w_n, i_m \rangle$
- signalling one element in the background assumed by the believer
- belief: $\langle w, i \rangle$ is an element of the proposition of CP

• value of propositional attitude (PA) verbs: functions $[\langle w, i \rangle \rightarrow \langle u_n, p \rangle]$ with $u_n \in U$, p a proposition (set of $\langle w_n, i_m \rangle$) and compatible to u_n 's background

- value of propositional attitude (PA) verbs: functions $[\langle w, i \rangle \to \langle u_n, p \rangle]$ with $u_n \in U$, p a proposition (set of $\langle w_n, i_m \rangle$) and compatible to u_n 's background
- ullet up ($\hat{\ }\chi$): an operator which gives the intension of an expression χ

- value of propositional attitude (PA) verbs: functions $[\langle w, i \rangle \to \langle u_n, p \rangle]$ with $u_n \in U$, p a proposition (set of $\langle w_n, i_m \rangle$) and compatible to u_n 's background
- up ($\hat{\chi}$): an operator which gives the intension of an expression χ
- the full logic of ^ and ~ as designed by Montague next week

- value of propositional attitude (PA) verbs: functions $[\langle w, i \rangle \to \langle u_n, p \rangle]$ with $u_n \in U$, p a proposition (set of $\langle w_n, i_m \rangle$) and compatible to u_n 's background
- up ($^{\hat{}}\chi$): an operator which gives the intension of an expression χ
- the full logic of ^ and ~ as designed by Montague next week
- rids us of the problem that the belief content looks truth-conditional (a sentence) but doesn't contribute to the embedding sentence's truth-value. PA verbs take intensions as arguments.

• Quine's story: Ralph knows...

- Quine's story: Ralph knows...
- Bernard J.Ortcutt, the nice guy on the beach.

- Quine's story: Ralph knows...
- Bernard J.Ortcutt, the nice guy on the beach.
- He sees a strange guy with a hat in the dark alley a spy?

- Quine's story: Ralph knows...
- Bernard J.Ortcutt, the nice guy on the beach.
- He sees a strange guy with a hat in the dark alley a spy?
- Ortcutt just likes to behave funny on the way to his pub...

- Quine's story: Ralph knows...
- Bernard J.Ortcutt, the nice guy on the beach.
- He sees a strange guy with a hat in the dark alley a spy?
- Ortcutt just likes to behave funny on the way to his pub...
- and actually is sinister guy in the alley!

- Quine's story: Ralph knows...
- Bernard J.Ortcutt, the nice guy on the beach.
- He sees a strange guy with a hat in the dark alley a spy?
- Ortcutt just likes to behave funny on the way to his pub...
- and actually is sinister guy in the alley!
- Only Ralph doesn't know.

Is Ralph insane?

• What's the truth value of...

Is Ralph insane?

- What's the truth value of...
- Ralph believes that the guy from the beach is a spy

Is Ralph insane?

- What's the truth value of...
- Ralph believes that the guy from the beach is a spy.
- true: since Ortcutt and the guy in the hat are one individual

Is Ralph insane?

- What's the truth value of...
- Ralph believes that the guy from the beach is a spy.
- true: since Ortcutt and the guy in the hat are one individual
- false: since Ralph doesn't know that and in a way 'doesn't believe it'

• the Russelian interpretation for *the* like \exists with a uniqueness condition (as a GQ): $\lambda Q \lambda P \left[\exists x \left[Q(x) \wedge P(x)\right] \wedge \forall v \left[Q(y) \leftrightarrow v = x\right]\right]$
