Formale Semantik 04. Aussagenlogik

Roland Schäfer

Institut für Germanistische Sprachwissenschaft Friedrich-Schiller-Universität Jena

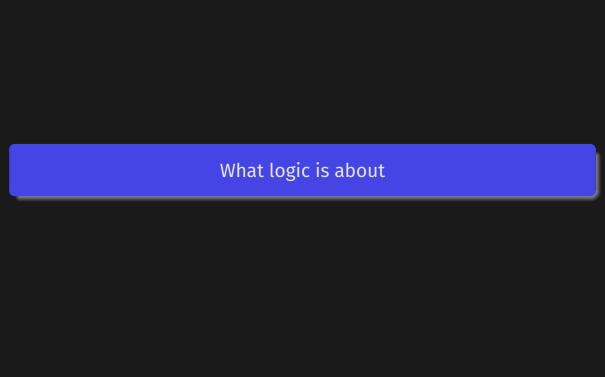

stets aktuelle Fassungen: https://github.com/rsling/VL-Deutsche-Syntax

Inhalt

- What logic is about
 - On reasoning
 - Where we need logic
- 2 Statement calculus

- Formalization: Recursive Syntax
- Interpretation
- Laws of the PropC
- Rules of Inference
- Proof

The book (PMW:87-246) deals with logic far more in-depth than we do. Only what is mentioned on the slides is relevant for the test. Reading the whole chapter from PMW will do you no harm, though.

• a collection of statements (propositions)

- a collection of statements (propositions)
- axioms (statements accepted to be true)

- a collection of statements (propositions)
- axioms (statements accepted to be true)
- maybe based on observations (induction)

- a collection of statements (propositions)
- axioms (statements accepted to be true)
- maybe based on observations (induction)
- statements that follow from the axioms (deduction)

- a collection of statements (propositions)
- axioms (statements accepted to be true)
- maybe based on observations (induction)
- statements that follow from the axioms (deduction)
- predictions beyond the axioms

- a collection of statements (propositions)
- axioms (statements accepted to be true)
- maybe based on observations (induction)
- statements that follow from the axioms (deduction)
- predictions beyond the axioms
- rechecking for usability: e.g., Russell's paradox

• axioms: atomic truths of your theory

- axioms: atomic truths of your theory
- theorem: a proposition you want to prove

- axioms: atomic truths of your theory
- theorem: a proposition you want to prove
- lemma: subsidiary propositions (used to prove the theorem)

- axioms: atomic truths of your theory
- theorem: a proposition you want to prove
- lemma: subsidiary propositions (used to prove the theorem)
- corollary: propositions proved while proving some axiom

• logic does not generate truths

- logic does not generate truths
- formalizing statements, predications etc.

- logic does not generate truths
- formalizing statements, predications etc.
- rules of deduction from axioms to theorems

- logic does not generate truths
- formalizing statements, predications etc.
- rules of deduction from axioms to theorems
- empirical (induction) and exact (deduction) science

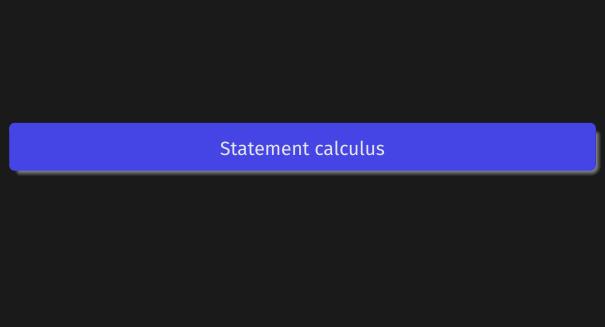

- logic does not generate truths
- formalizing statements, predications etc.
- rules of deduction from axioms to theorems
- empirical (induction) and exact (deduction) science
- aiming at an adequate model of the world (e.g., heliocentric universe)

• truth-conditional

- truth-conditional
- compositional behavior of propositions and connectives

- truth-conditional
- compositional behavior of propositions and connectives
- a logic for entailments

- truth-conditional
- compositional behavior of propositions and connectives
- a logic for entailments
- ullet why, e.g.: It is not the case that someone is happy. o Nobody is happy.

• statements/propositions = the atoms

- statements/propositions = the atoms
- a propositional symbol p: a well-formed formula (wff)

- statements/propositions = the atoms
- a propositional symbol p: a well-formed formula (wff)
- ex.: Herr <u>K</u>eydana is a passionate cyclist.: k

- statements/propositions = the atoms
- a propositional symbol p: a well-formed formula (wff)
- ex.: Herr Keydana is a passionate cyclist.: k
- [k]=1 or o (depending on corresponding **model**)

• syntax: restricts the forms of wff's to make them interpretable

- syntax: restricts the forms of wff's to make them interpretable
- define functors: functions in $\{0,1\}$

- syntax: restricts the forms of wff's to make them interpretable
- define functors: functions in $\{0,1\}$
- If p and q are wff's, then

- syntax: restricts the forms of wff's to make them interpretable
- define functors: functions in $\{0,1\}$
- If p and q are wff's, then
 - → ¬p

- syntax: restricts the forms of wff's to make them interpretable
- define functors: functions in $\{0,1\}$
- If p and q are wff's, then
 - → ¬p
 - ▶ p∨q

- syntax: restricts the forms of wff's to make them interpretable
- define functors: functions in $\{0,1\}$
- If p and q are wff's, then
 - → ¬p
 - p∨q
 - ▶ p∧q

- syntax: restricts the forms of wff's to make them interpretable
- define functors: functions in $\{0,1\}$
- If p and q are wff's, then
 - → ¬p
 - ▶ p∨q
 - ▶ p/q
 - p → q

- syntax: restricts the forms of wff's to make them interpretable
- define functors: functions in $\{0,1\}$
- If p and q are wff's, then
 - **▶** ¬p
 - ▶ p∨q
 - p∧q
 - p → q
 - p↔q

Complex (molecular) formulas

- syntax: restricts forms of wff's to make them interpretable
- define functors: functions in $\{\langle 0,1\rangle, \langle 1,0\rangle, 0,1\}$
- If p and q are wff's, then
 - → ¬p (negation)
 - ▶ p ∨ q (disjunction)
 - ▶ p∧q (conjunction)
 - ▶ $p \rightarrow q$ (conditional)
 - $ightharpoonup p \leftrightarrow q$ (biconditional)

is also a wff.

Complex (molecular) formulas

- syntax: restricts forms of wff's to make them interpretable
- define functors: functions in $\{\langle 0,1\rangle, \langle 1,0\rangle, 0,1\}$
- If p and q are wff's, then
 - → ¬p (negation 'not')
 - ▶ p∨q (disjunction 'or')
 - p∧q (conjunction 'and')
 - ightharpoonup p
 ightharpoonup q (conditional 'if')
 - $ightharpoonup p \leftrightarrow q$ (biconditional 'iff')

is also a wff.

Functions and truth tables

• standard defintion:

$$\llbracket \neg \rrbracket = \left[\begin{array}{c} 1 \to 0 \\ 0 \to 1 \end{array} \right]$$

Functions and truth tables

• standard defintion:

$$\llbracket \neg \rrbracket = \left[\begin{array}{c} 1 \to 0 \\ 0 \to 1 \end{array} \right]$$

but most widely used: truth tables

Disjunction

р	V	q
1	1	1
1	1	0
0	1	1
О	0	0

Disjunction

р	V	q
1	1	1
1	1	0
0	1	1
0	0	0

• Herr <u>K</u>eydana is a passionate cyclist **or** we all <u>l</u>ove logic.

Disjunction

- Herr Keydana is a passionate cyclist **or** we all love logic.
- *K*∨L

Conjunction

р	Λ	q
1		1
1		0
0		1
0		0

Conjunction

р	Λ	q
1	1	1
1	0	0
О	0	1
0	0	0

• Herr Keydana is a passionate cyclist **and** we all Love logic.

Conjunction

- Herr Keydana is a passionate cyclist **and** we all love logic.
- K∧L

Conditional

р	\rightarrow	q
1	1	1
1		0
0		1
0		0

Conditional

$$\begin{array}{c|cccc} p & \to & q \\ \hline 1 & 1 & 1 \\ 1 & 0 & 0 \\ 0 & 1 & 1 \\ 0 & 1 & 0 \\ \hline \end{array}$$

• *If* it <u>rains</u>, **then** the <u>s</u>treets get wet.

Conditional

$$\begin{array}{c|cccc} p & \to & q \\ \hline 1 & 1 & 1 \\ 1 & 0 & 0 \\ 0 & 1 & 1 \\ 0 & 1 & 0 \\ \hline \end{array}$$

- *If* it <u>rains</u>, **then** the <u>s</u>treets get wet.
- R →S

If it rains, the streets get wet.

• it is raining (1), the streets are wet 1:1

- it is raining (1), the streets are wet 1:1
- it is raining (1), the streets are dry o: 0

- it is raining (1), the streets are wet 1:1
- it is raining (1), the streets are dry 0:0
- it is not raining (o), the streets are wet 1:1

- it is raining (1), the streets are wet 1:1
- it is raining (1), the streets are dry 0:0
- it is not raining (o), the streets are wet 1:1
- it is not raining (o), the streets are dry o: 1

- it is raining (1), the streets are wet 1:1
- it is raining (1), the streets are dry o: o
- it is not raining (o), the streets are wet 1:1
- it is not raining (o), the streets are dry o:1
- ex vero non sequitur falsum

Biconditional

p	\leftrightarrow	q
1		1
1		0
0		1
0		0

Biconditional

• If and only if your score is above 50, then you pass the semantics exam.

Biconditional

$$\begin{array}{c|cccc} p & \leftrightarrow & q \\ \hline 1 & 1 & 1 \\ 1 & 0 & 0 \\ 0 & 0 & 1 \\ 0 & 1 & 0 \\ \hline \end{array}$$

- If and only if your score is above 50, then you pass the semantics exam.
- S ↔P

Scope of functors

• brackets are facultative

Scope of functors

- brackets are facultative
- or set non-default functor scope

Scope of functors

- brackets are facultative
- or set non-default functor scope
- default scope

• $p \land \neg q \lor r \rightarrow \neg s$

- $\bullet \hspace{0.1cm} p \wedge \neg q \vee r \rightarrow \neg s$
- $p \wedge (\neg q) \vee r \rightarrow (\neg s)$

- $p \land \neg q \lor r \rightarrow \neg s$
- $p \wedge (\neg q) \vee r \rightarrow (\neg s)$
- $(p \land (\neg q)) \lor r \rightarrow (\neg s)$

- $p \land \neg q \lor r \rightarrow \neg s$
- $p \wedge (\neg q) \vee r \rightarrow (\neg s)$
- $(p \land (\neg q)) \lor r \to (\neg s)$
- $\bullet \ ((p \land (\neg q)) \lor r) \to (\neg s)$

- $p \land \neg q \lor r \rightarrow \neg s$
- $p \wedge (\neg q) \vee r \rightarrow (\neg s)$
- $(p \land (\neg q)) \lor r \rightarrow (\neg s)$
- $((p \land (\neg q)) \lor r) \rightarrow (\neg s)$
- $(((p \land (\neg q)) \lor r) \rightarrow (\neg s))$

• for n atoms in the term: 2^n lines

- for n atoms in the term: 2^n lines
- alternating blocks of 1's and 0's under every atom

- for n atoms in the term: 2^n lines
- alternating blocks of 1's and 0's under every atom
- $2^{(m-1)}$ times '1' followed by $2^{(m-1)}$ times '0' for the m-th atom from the right

- for n atoms in the term: 2^n lines
- alternating blocks of 1's and 0's under every atom
- $2^{(m-1)}$ times '1' followed by $2^{(m-1)}$ times '0' for the m-th atom from the right
- until 2^n lines are reached

 - ▶ Peter walks or Sue snores. ⇔ Sue snores or Peter walks.

- Associative Laws for ∨ and ∧ (Assoc.)
 - \blacktriangleright $((P \lor Q) \lor R) \Leftrightarrow (P \lor (Q \lor R))$
 - ► ((He walks or she talks) or we walk.) ⇔ (He walks or (she talks or we walk.))
- Commutative Laws for \vee and \wedge (Comm.):
 - $ightharpoonup (P \lor Q) \Leftrightarrow (Q \lor P)$
 - ▶ Peter walks or Sue snores. ⇔ Sue snores or Peter walks.
- Distributive Laws for ∨∧ and ∧∨ (Distr.):

- Associative Laws for ∨ and ∧ (Assoc.)
 - \blacktriangleright $((P \lor Q) \lor R) \Leftrightarrow (P \lor (Q \lor R))$
 - ► ((He walks or she talks) or we walk.) ⇔
 (He walks or (she talks or we walk.))
- Commutative Laws for ∨ and ∧ (Comm.)
 - $ightharpoonup (P \lor Q) \Leftrightarrow (Q \lor P)$
 - ▶ Peter walks or Sue snores. ⇔ Sue snores or Peter walks.
- Distributive Laws for VA and AV (Distr.):
 - $\blacktriangleright (P \lor (Q \land R)) \Leftrightarrow ((P \lor Q) \land (P \lor R))$

- - \blacktriangleright ((He walks or she talks) or we walk.) \Leftrightarrow (He walks or (she talks or we walk.))
- - ▶ Peter walks or Sue snores. ⇔ Sue snores or Peter walks.
- - ► (Sue snores) and (Peter walks or we talk).
 - \Leftrightarrow (Sue snores and Peter walks) or (Sue snores and we talk).

Complement Laws:

- Complement Laws:
 - ► Tautology (T): $(P \lor \neg P) \Leftrightarrow \mathbf{T}$

- Complement Laws:
 - ► Tautology (T): $(P \lor \neg P) \Leftrightarrow \mathbf{T}$
 - ▶ Contradiction (F): $(P \land \neg P) \Leftrightarrow \blacksquare$

- Complement Laws:
 - ► Tautology (T): $(P \lor \neg P) \Leftrightarrow \mathbf{T}$
 - ▶ Contradiction (F): $(P \land \neg P) \Leftrightarrow \mathbf{F}$
 - ▶ Double Negation (DN): $(\neg \neg P) \Leftrightarrow P$

- Complement Laws:
 - ► Tautology (T): $(P \lor \neg P) \Leftrightarrow \mathbf{T}$
 - ► Contradiction (F): $(P \land \neg P) \Leftrightarrow \mathbf{F}$
 - ▶ Double Negation (DN): $(\neg \neg P) \Leftrightarrow P$
 - It is not the case that Sandy is not walking.
 ⇔ Sandy is walking.

Conditionals Laws

Implication (Impl.):

Р	\rightarrow	Q	\Leftrightarrow	¬	Ρ	V	Q
					1		
		0		О			0
0		1			О		1
0		0		1	0		0

Conditionals Laws

Implication (Impl.):

Р	\rightarrow	Q	\Leftrightarrow	¬	Ρ	V	Q
1		1		0	1		1
1		0		0			О
О		1					
0		0		1	0		О

Contraposition (Contr.):

Р	\rightarrow	Q	\Leftrightarrow		Q	\rightarrow		Р
1	1	1		0	1	1	0	1
1		0		1	0		0	
0		1		0			1	0
0		0		1	0		1	О

DeMorgan's Laws:

- DeMorgan's Laws:
 - $\qquad \qquad \neg (P \lor Q) \Leftrightarrow (\neg P \land \neg Q)$

- - ► $\neg (P \lor Q) \Leftrightarrow (\neg P \land \neg Q)$ ► alternatively: $\overline{P} \lor \overline{Q} \Leftrightarrow \overline{P} \land \overline{Q}$

- DeMorgan's Laws:

 - ▶ alternatively: $\overline{P \lor Q} \Leftrightarrow \overline{P} \land \overline{Q}$

- DeMorgan's Laws:

 - ▶ alternatively: $\overline{P \lor Q} \Leftrightarrow \overline{P} \land \overline{Q}$
 - $ightharpoonup \neg (P \land Q) \Leftrightarrow (\neg P \lor \neg Q)$
 - ▶ consequently: $\overline{\overline{P} \lor \overline{Q}} \Leftrightarrow \overline{\overline{P}} \land \overline{\overline{Q}} \Leftrightarrow P \land Q$

The Modus Ponens (MP)

• Definition:

Deminicion.					
$P \rightarrow Q$	premise 1				
Р	premise 2				
Q	conclusion				

The Modus Ponens (MP)

• Definition:

$egin{array}{ccc} P & ightarrow & Q \ P & \end{array}$	premise 1 premise 2
Q	conclusion

• or: $\overline{(P \to Q) \land (P)} \to \overline{(Q)}$

The Modus Ponens (MP)

• Definition:

Deminicion.				
Р	\rightarrow	Q	premise 1	
Р			premise 2	
		Q	conclusion	

- or: $(P \rightarrow Q) \land (P) \rightarrow (Q)$
- (1) If It rains, the streets get wet. (2) It is raining.
 - \rightarrow The streets are getting wet.

• Premises are always set to be true!

- Premises are always set to be true!
- the table:

```
egin{array}{cccc} P & 
ightarrow & C \ 1 & 1 & 1 \end{array}
```

1 0 0

0 1 1

0 1 0

- The conditional must be true.
- cancel the 'false' row

0

```
P \rightarrow Q
1 1 1
1 0 0
0 1 1
```

0

- P must be true.
- cancel the 'false' rows, Q can only be true:

```
P \rightarrow C
```

The Modus Tollens (MT)

Definition:

The Modus Tollens (MT)

Definition:

• the table illustration:

```
P → Q
1 1 1 (by premise 2)
1 0 0 (by premise 1)
0 1 1 (by premise 2)
0 1 0
```

The Syllogisms

- Hypothetical Syllogism (HS):
 - $((P \to Q) \land (Q \to R)) \to (P \to R)$
 - (1) If it rains, the streets get wet. (2) If the streets get wet, it smells nice. → If it rains, it smells nice.

The Syllogisms

- Hypothetical Syllogism (HS):
 - $((P \to Q) \land (Q \to R)) \to (P \to R)$
 - (1) If it rains, the streets get wet. (2) If the streets get wet, it smells nice. → If it rains, it smells nice.
- Disjunctive Syllogism (DS):
 - $((P \lor Q) \land (\neg P)) \to (Q)$
 - ▶ (1) Either Peter sleeps or Peter is awake. (2) Peter isn't awake.
 - ightarrow Peter sleeps.

Trivial rules

- Simplification (Simp.)
 - \triangleright $(P \land Q) \rightarrow F$
 - lacksquare (1) It is raining and the sun is shining. ightarrow It is raining.

Trivial rules

- Simplification (Simp.)
 - $\triangleright (P \land Q) \rightarrow P$
 - lacktriangle (1) It is raining and the sun is shining. ightarrow It is raining.
- Conjunction (Conj.)
 - $\blacktriangleright (P) \land (Q) \rightarrow (P \land Q)$
 - \blacktriangleright (1) It is raining. (2) The sun is shining. \rightarrow It is raining and the sun is shining.

Trivial rules

- Simplification (Simp.)
 - $ightharpoonup (P \land Q) \rightarrow P$
 - ightharpoonup (1) It is raining and the sun is shining. ightharpoonup It is raining.
- Conjunction (Conj.)
 - $\blacktriangleright (P) \land (Q) \rightarrow (P \land Q)$
 - lacktriangle (1) It is raining. (2) The sun is shining. ightarrow It is raining and the sun is shining.
- Addition (Add.)
 - $ightharpoonup (P \wedge Q)$
 - ightharpoonup (1) It is raining or the sun is shining.
 - What if Q is instantiated as true or false by another premise?

A sample proof

• Prove $p \lor q$ from $(p \lor q) \to \neg (r \land \neg s)$ and $r \land \neg s$

A sample proof

- Prove $p \vee q$ from $(p \vee q) \rightarrow \neg (r \wedge \neg s)$ and $r \wedge \neg s$
- The proof:

$$\begin{array}{c|c} & & p \lor q \\ 1 & (p \lor q) \to \neg (r \land \neg s) \\ \hline 2 & r \land \neg s \\ \hline & p \lor q \\ \hline & 1,2,MT \\ \end{array}$$
